Service Statement

Mark Tygert

Disclaimer: The sole purpose of this service statement is to apply for jobs; I make no serious attempt to give appropriate credit to those who gave me the opportunities to serve.

As I have been employed as a basic researcher in industry for the past dozen years, my professional service recently has been limited to serving on the U.S. National Academies of Sciences, Engineering, and Medicine Roundtable on Data Science Post-Secondary Education, to being an associate editor for the *SIAM Journal on Matrix Analysis and Applications*, and of course to reviewing uncountably many submissions across many journals. Prior to joining Meta, I served as the director of the master's degree in scientific computing and then as the inaugural director of the master's degree in scientific computing and data science at NYU's Courant Institute of Mathematical Sciences. And, of course, there is all the run-of-the-mill work in administration and committees that is standard for basically all large employers.

Becoming a dean is probably not one of my ambitions. Frankly, if I were to become interested in doing management full-time, then I would likely try management in industry and get paid handsomely for performing management full-time. That said, aiding as much as possible with management without actually becoming a full-time manager always seems like a good idea to me.
